Hi Con AquaFilter™ Silt Water Treatment System

Made in Singapore

(Aqua-03-10)

(Aqua-90 and bigger capacities)

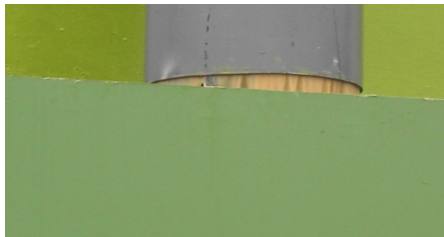

(Aqua-20-80)

Pictures for reference only

The AquaFilter™ System is a version of the factory-built plant. The complete treatment process of chemical coagulation, flocculation, clarification and filtration has been integrated into one Vertical Tank or one system steel tank. It is design to suit different levels of water quality request, also to permit permanent installation in one location or portable installation on skids or trailers. The essentially reacting area (for raw water mixed with chemicals) and settling area are utilized together with the highly efficient process to provide excellent treatment and greatly reduce plant area.

Flow Rate (AquaFilter™ 03~100M3/Hr and above) are available upon requested.

“Water in before treated”

“Water out after treated”
